

FLOWTEC
Self-compacting concrete

FLOWTEC. FAST, EASY & COST SAVING.

Flowtec is a self-compacting concrete from Brett that is changing the way businesses are thinking about construction.

Unlike conventional concrete, Flowtec is a semi-liquid that pours and flows quickly and levels naturally with very little manual labour and no vibration or floating.

It gives a strong, stable concrete with an exceptional finish at a fraction of the total cost of laying traditional concrete.

A concrete you can rely on

Self-compacting concrete is a well established product in the industry and is trusted in some of the most high profile and advanced construction projects in the world.

JUST LIKE CONVENTIONAL CONCRETE, ONLY BETTER.

Flowtec's strength, workability and stability means it performs in exactly the same way and in the same environments as conventional concrete, but with its huge increase in efficiency and reduced reliance on manual labour you can save money on every project.

Flowtec concrete conforms to the requirements of European standard BS EN 206-1: Concrete Specification, performance, production and conformity and with the requirements of BS8500-1 and BS 8500-2. Available in strength classes C20 to C45 with higher grades possible.

Flowtec saves you money

By reducing the amount of plant and manual handling, projects can be completed faster and more economically.

Conventional concrete

Flowtec

Indicative savings by using Flowtec over conventional concrete in a typical house oversite.

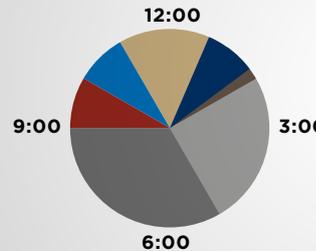

Like for like performance

	Flowtec	Concrete

Vertical	✓	✓
Trenches	✓	✓
High workability	✓	✗
Self compacting	✓	✗

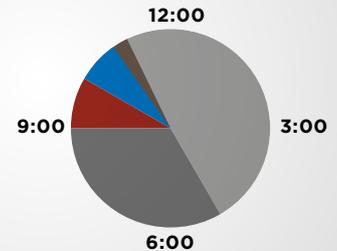

No power-floating saves you time onsite

Flowtec doesn't need power floating, so its delivery can be flexible and it can be arranged around other site activities.

Conventional concrete time

Flowtec time

KEY: ■ Preparation | ■ Pouring | ■ Initial set | ■ Power floating | ■ Curing

Indicative time saving using Flowtec.

FREE ON-SITE SUPPORT.

Flowtec is easy and straight forward to use, but if you would like a bit of guidance, especially on your first few pours, we can provide on-site support to ensure your project goes without a hitch. If you have a particularly challenging project or just need a small load give us a call and we can help you with the right mix and volume for the job in hand.
